What's new in Matrox MXO 2.1?

- Leopard support
- Apple Color support
- Adobe Premiere Pro CS3 support on the Mac
- Genlock timing offset controls
- Support for the latest generation of the MacBook Pro

Mac OS X v10.5 (Leopard) support

With 300+ new features, Leopard is the most impressive Mac OS X version yet and is now fully supported by Matrox MXO. We are proud to bring you timely support for this new release, ahead of our competition.

Apple Color v1.0.2 support

Color, Apple's new professional color grading application lets you quickly and easily experiment with primary and secondary color grade adjustments in HD and SD. Matrox MXO lets you accurately view your Color work on an inexpensive Apple Cinema Display or other DVI monitor. It provides all the tools you need:

- Matrox calibration utilities let you adjust and control your DVI monitor exactly like you would a broadcast HD/SD monitor. Controls for hue, chroma, contrast, brightness, and blue-only are provided. This unique control gives you completely accurate color representation you can trust.
- Super black and super white monitoring on the DVI display expands your viewable color range with Final Cut Pro.
- User-selectable 1:1 pixel mapping means there are no scaling artifacts to interfere with the pristine view of your footage.

With Matrox MXO there's no need to invest in an expensive HD video monitor to do color grading.

Adobe Premiere Pro CS3 v3.1.1 support

All the features of Matrox MXO are now available to Adobe Premiere Pro CS3 users on the Mac. Use MXO confidently for inexpensive HD monitoring on an ACD or other DVI monitor, frame-accurate broadcast-quality HD/SD output from your Mac laptop or workstation, realtime downscaling from HD to SD, and genlockable HD/SD scan conversion for flicker-free video output of your computer desktop.

Genlock timing offset controls

Of particular benefit to broadcasters, the new MXO genlock timing offset controls can be used to align your video output relative to your external genlock source to compensate for cable delays within your facility.

Support for the latest generation of the MacBook Pro

With MXO updater 2.1.1 and Mac OS X updater 10.5.2, the latest generation of the MacBook Pro is supported.
